

Stem Cell Research Products

bFGF-2

This recombinant human basic FGF (bFGF) is supplied as a lyophilized powder. It is suitable for use in receptor binding, transmembrane signaling, stem cell and other cell biology research applications.

HRP-0011	Human recombinant basic FGF-2, 50ug	\$225.00
HRP-0011-1mg	Human recombinant basic FGF-2, 1mg	
	\$1050.00	

Leukemia inhibitory factor (LIF)

SC-041-2	Recombinant Mouse Leukemia Inhibitory Factor (LIF), 10 million units	\$1090.00
SC-043-2	Recombinant Human Leukemia Inhibitory Factor (LIF), 10 million units	\$1290.00

Cytokines

HRP-0012	human recombinant EGF, 500ug	\$450.00
SC-041-1	human recombinant TGF-beta1, 1ug	\$190.00
SC-042	human recombinant Noggin, 10ug	\$119.00

Alkaline Phosphatase Staining Kit

Stem cells differ from other kinds of cells in the body. All stem cells—regardless of their source—have three general properties: they are capable of dividing and renewing themselves for long periods; they are unspecialized; and they can give rise to specialized cell types. The activity of alkaline phosphatase, which is the cell surface marker of the undifferentiated cells, was tested to confirm the characteristics of undifferentiated embryonic stem cell.

SC-003	Alkaline Phosphatase Staining kit containing Fix solution, staining solution A and staining solution B, 100 reactions.	\$160.00
